

# Implant surfaces before and after GalvoSurge® cleaning

The unique GalvoSurge mode of action completely removes biofilm from any titanium implant surface, leaving the implant clean and ready for re-osseointegration.

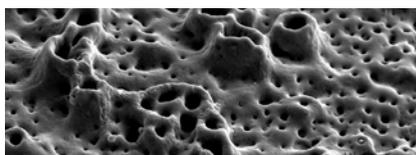

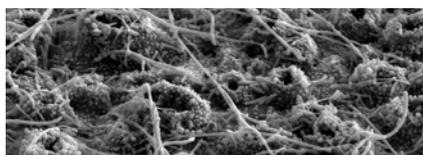

Before

After

**"GalvoSurge is unique and represents a paradigm shift in managing the biofilm on infected implant surfaces"**

Dr. Mike Danesh-Meyer, Periodontist, New Zealand

**"Before GalvoSurge there was no treatment against peri-implantitis that I really believed in."**

Dr. Pieter Avontroodt, Periodontist, The Netherlands

**"Finally! For the first time, re-osseointegration has been demonstrated in patients. Complete decontamination of the implant and restoration of a hydrophilic surface are key factors that make electrolytic cleaning so successful."**

Dr. Urs Brodbeck, Specialist in reconstructive dentistry, Switzerland

**"GalvoSurge is the ultimate surface cleaning method that allows me to save more implants."**

Dr. Pedro Peña, Oral Surgeon, Spain

**Note** The GalvoSurge Dental Implant Cleaning System removes bacterial biofilm. In these photographs, a clear difference can be seen before and after the procedure. However, because bacterial biofilm is not visible to the naked eye, the difference might not be visible on every implant.
